

ABSTRACT

An adjuster selectively collapses a support relative to a base so that the apparatus can support writing material and function as a clipboard; or extends the support relative to the base so that the apparatus can support reading material and function as a reading stand. A stay arm extends between the base and the support for holding the support at a desired angle relative to the base. A light is provided for illuminating writing or reading material. The light is on a stalk that can be pivoted and telescoped.
